

MAGNETIC FIELD HITESTER FT3470-51/-52

Environmental Measuring Instruments

Complies with ICNIRP 2010

Providing robust support for 3-axis magnetic flux density measurement

Measurement of environmental magnetic fields

Measurement of magnetic fields in the vicinity of electrical power equipment

Compliance testing of household appliances

Your one-stop solution for magnetic field measurement

The FT3470-50 Series complies with the ICNIRP 2010 guidelines as well as other relevant standards for evaluation testing.

1. International guidelines ICNIRP 2010 compliant.

The guideline value has been changed to $200 \ \mu T$ (for public exposure) at 50/60 Hz. The FT3470-50 Series completely supports related measurements.

2. Magnetic field measurement methods The FT3470-50 Series complies with IEC 62110/IEEE 644 as well as IEC 62233.

3. Magnetic field measuring instrument requirements The FT3470-50 Series complies with IEC 61786.

Measurement underneath transmission lines

The memory function is helpful when using the standard-defined measurement method for averaging readings taken at three different heights. The FT3470-50 series can also be used to take measurements at substations, underground lines, and pole-mounted transformers.

Long-term measurement and waveform observation

Using the output function, the FT3470-50 series can be combined with the MEMORY HiCORDER MR8880-20 to observe waveforms, allowing the capture of level and waveform output.

<Convenient functionality>

Memory function

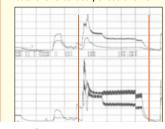

The instrument can store up to 99 measurement data points in its memory.

Saved data can be checked and deleted on-site.

Level output

The level output function allows RMS values to be recorded with a recorder or logger, making it useful for applications involving observation of data over extended periods of time.

Checking data on a computer

The bundled application software can be used to check measurement data. Compatible OS : Windows XP, Vista, 7 Functions : RMS logger, batch export and tester setup

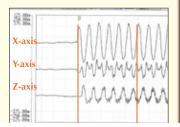

Storage format : CSV format

Batch capture: Measurement data recorded using the instrument's memory function can be imported to a computer with a single operation.

Waveform output

You can also observe magnetic field waveforms by connecting the instrument to an oscilloscope or recorder.

Features

1 Simple operation for easy measurement

Procedure for measuring magnetic flux density (in microteslas)

The FT3470-50 series can also be used to measure exposure levels as defined by IEC/EN 62233 (compliant with the ICNIRP 2010 guidelines).

3. Two 3-axis sensors

Select from two differently sized sensors according to the needs of your application.

DVANTAGE

100cm² Sensor

Ships with the FT3470-51 and FT3470-52 Standard sensor for use with the IEC/EN 62233 standard. φ122×295Lmm, 220g

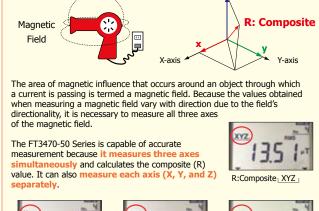

3cm² Sensor

Ships with the FT3470-52 Enables detailed analysis of magnetic field distribution for measurement targets. □27×165Lmm, 95g

The X-, Y-, and Z-axes of Hioki's 3-axis sensors are labeled, making it easy to identify the direction of magnetic fields.
